About me

Software Engineer with over 4 years of experience building scalable applications using both modern JavaScript ecosystem and enterprise Java technologies. Proficient in full-stack development with Node.js, React, Next.js for web applications, and Java Spring Boot for robust backend systems and microservices architecture.

I specialize in designing and implementing scalable solutions using the best of both worlds: modern JavaScript for responsive frontends and rapid development, combined with Java's enterprise-grade reliability for critical backend systems. Experience includes leading technical initiatives, mentoring development teams, and delivering high-impact applications that handle complex business requirements and scale to serve thousands of users.

Experience

Software Engineer

UNAM - UTICT | Full Time

October 2024 - Present

Remote

Led development of mission-critical educational platforms serving thousands of students using both JavaScript and Java ecosystems.

- **Full-Stack Development:** Built scalable applications using Node.js/Express with TypeScript for rapid development and Java Spring Boot for enterprise-grade backend services.
- **Legacy Integration:** Designed custom XML-to-JSON parser using both Node.js streams and Java SAX processing for complex SOAP integrations.
- **Testing Strategy:** Implemented comprehensive testing with Jest for JavaScript services and JUnit/Mockito for Java applications, achieving 90%+ coverage.
- **Performance:** Optimized both JavaScript and Java APIs, reducing response times by 60% through query optimization and caching strategies.

Impact: Delivered robust, maintainable systems that handle high traffic loads using the best of both ecosystems.

Full-Stack Developer | Tech Lead

Rocket Code | Full Time

June 2024 - December 2024 • 6 months

Remote

Built enterprise-grade insurance platform from scratch using both JavaScript and Java technologies, promoted to Tech Lead within 3 months.

- **Architecture:** Designed distributed system with Java Spring Boot microservices for core business logic and Node.js/Express for rapid API development and integration services.

- **Frontend:** Built Angular applications with TypeScript, implementing role-based logic and modern state management for responsive user interfaces.
- **Process Engineering:** Created automated tools for code quality using both JavaScript and Java tooling, established CI/CD pipelines with Maven and npm.
- **Leadership:** Mentored development team of 10+, established coding standards for both JavaScript and Java ecosystems.

Results: Reduced deployment time by 70%, improved system reliability, and established engineering excellence culture across both technology stacks.

Front-End Developer

Xocolatl Finance | Freelance

February 2024 - August 2024 • 6 months

Remote

Developed UI for blockchain-based dApp supporting XOC cryptocurrency using modern JavaScript stack.

- **Interface:** Built responsive dashboard, landing page, and transaction flows with Next.js/React/TypeScript.
- **Wallet Integration:** Enabled MetaMask and other wallet transactions using Web3 libraries.
- **Blockchain:** Integrated smart contracts via Wagmi/Scaffold for clean UX.
- **Collaboration:** Worked with backend devs for seamless contract interaction.

Outcome: Delivered secure, reliable crypto user experience.

Front-End Developer

Red Cap | Freelance

October 2024 - April 2025 • 6 months

Remote

Enhanced e-commerce platform for premium products using modern JavaScript technologies.

- **Product Pages:** Developed optimized pages focusing on UX and conversion using React.
- **Content:** Implemented dynamic sections highlighting product benefits with JavaScript.
- **E-commerce:** Enhanced listings with detailed descriptions and pricing.
- **UX:** Improved product presentation with clear benefit breakdowns.

Outcome: Enhanced platform's ability to communicate product benefits effectively.

Full-Stack Developer

ICCBR 2024 | Freelance

December 2022 - February 2024 • 1 year 2 months

Remote

Modernized global academic conference platform using both JavaScript and Java ecosystems for optimal performance and maintainability.

- **Migration Strategy:** Refactored from legacy PHP to Vue.js frontend and Java Spring Boot backend with microservices architecture.
- **Security:** Implemented comprehensive security using Spring Security for Java services and JWT authentication for JavaScript APIs.
- **Payments:** Integrated Stripe payment processing with Java backend services and JavaScript frontend components.
- **DevOps:** Established CI/CD pipelines using both Maven for Java and npm for JavaScript, deployed with Docker and AWS.

Impact: Transformed legacy system into modern, secure, and scalable platform serving global academic community with optimal technology choices.

Education

Instituto Tecnológico de Mérida

Computer Systems Engineer

Technical Skills

Languages

JavaScript (ES6+) , TypeScript , Java , Python , PHP

Backend

Node.js , Express.js , NestJS , Spring Boot , Django , Prisma

Databases

PostgreSQL , MySQL , Oracle

Blockchain

Wagmi , Scaffold

Devops

AWS , Docker , Git , GitHub Actions

Frontend

React.js , Next.js , Angular , Vue.js , Astro , TailwindCSS , Vite

Testing

Jest , Supertest

Others

Swagger , Bubble.io , Shopify
