About me

Software Engineer with over 4 years of experience specializing in backend development, scalable system architecture, and high-performance optimization. Skilled in building robust RESTful APIs using Node.js and Spring Boot, with cloud deployments through AWS and Docker. I also bring strong frontend capabilities with React, Angular, and Next.js.

I follow engineering best practices like SOLID and Clean Architecture, applying them across the development lifecycle with CI/CD pipelines and automated testing. I've led technical decisions, mentored teams, and delivered scalable solutions that drive real business impact. I'm passionate about building efficient, resilient systems that solve real-world problems.

Experience

Software Engineer Mid-Level

UNAM - UTICT | Full Time

October 2024 - Present

Remote

Led the development of two core platforms: a student-facing purchase portal and an administrative portal for internal management. Faced a key challenge integrating a legacy SOAP service with oversized XML responses. My actions included:

- **Backend Development:** Built Node.js/Express services following SOLID principles, using Swagger for contract-first API design.
- **Legacy Integration:** Designed a parser to convert complex XML data into JSON, integrating it into our architecture with performance and reuse in mind — this became the standard for future SOAP work.
- **Testing & QA:** Delivered and tested 10+ endpoints with Supertest, ensuring smooth frontend integration.
- **Frontend Work:** Developed UI components in React + Vite.
- **Teamwork:** Participated in code reviews and pair programming, contributing to a culture of shared quality.

Impact: Reduced integration times from hours to minutes, delivered without delaying deadlines, and earned internal recognition for my solution's clarity and reusability.

Full-Stack Developer | Tech Lead

Rocket Code | Full Time

June 2024 - December 2024 • 6 months

Remote

Joined a greenfield project to build an internal insurance platform from scratch. Started as a fullstack developer, later promoted to Tech Lead within 3 months. Key contributions:

- **Architecture:** Implemented Clean Architecture patterns for backend in Java (Spring Boot, Oracle) to ensure scalability and maintainability.

- **Frontend:** Built dynamic Angular 18 UIs with PrimeNG, enabling role-based logic across modules.
- **Strategic Thinking:** Rejected a risky last-minute scope change, proposed a solution via logic/db-level tweaks — preserving delivery without sacrificing quality.
- **Process Optimization:** Created a GPT-based tool to generate Conventional Commits + structured PRs, later adopted across the company.
- **Leadership:** Mentored 10 devs, assigned tasks based on strengths, fostered accountability and trust.

Results: Cut feature delivery time by 3–7 days, standardized code review workflow, and gained leadership trust in high-pressure settings.

Front-End Developer

La DAO | Freelance

February 2024 – August 2024 • 6 months

Remote

Developed the UI for a blockchain-based dApp supporting XOC cryptocurrency. Key contributions:

- **Interface Design:** Built responsive views for dashboard, landing page, and transaction flows using Next.js, React, and Tailwind.
- **Wallet Integration:** Enabled transactions with MetaMask and other wallets.
- **Blockchain Connectivity:** Integrated smart contracts via Wagmi and Scaffold with a clean frontend experience.
- **Collaboration:** Worked closely with backend devs to ensure seamless contract interaction.

Outcome: Delivered a cohesive user experience that handled crypto interactions securely and reliably.

Full-Stack Developer

ICCBR 2024 | Freelance

December 2022 – February 2024 • 1 year 2 months

Remote

Modernized a global academic conference platform. Key actions:

- **Migration:** Refactored from legacy PHP to Astro (frontend) and Node.js with Prisma (backend).
- **Security:** Redesigned architecture with injection-proof queries and robust design patterns.
- **Payments:** Integrated Stripe for ticket purchases.
- **DevOps:** Deployed using AWS and automated CI/CD pipelines.

Impact: Improved maintainability, enabled secure payments, and accelerated delivery through modern deployment practices.

Bubble Developer | Co-Founder

Jumwork | Full Time

May 2021 – January 2023 • 1 year 8 months

Remote

Co-founded and led development of a tutoring marketplace. Worked in 7-day sprints to ship an MVP with full functionality using Bubble.io. Key initiatives:

- **Core Features:** Implemented tutoring requests, bidding system, private chat with file sharing, Stripe payments, notifications, and reviews.
- **Analytics:** Built dashboards with real-time KPIs and filtering.
- **Product-Market Fit:** Validated demand, scaled to 40–60 paying users monthly.
- **Growth:** Ran Google Ads, pitched to investors, and represented the product at a global event with Jason Calacanis.

Outcome: Launched MVP in under a week, achieved breakeven, and laid the foundation for your tech/product career.

Education

Instituto Tecnológico de Mérida

Computer Stystems Engineer

Technical Skills

Languages

JavaScript (ES6+) , TypeScript , Java , Python , PHP

Devops

AWS , Docker , Git

Backend

Node.js , Express.js , Spring Boot , Django , Prisma

Frontend

React.js , Next.js , Angular , Astro , TailwindCSS , Vite

Databases

PostgreSQL , MySQL , Oracle

Testing

Jest , Supertest

Blockchain

Wagmi , Scaffold

Others

Swagger , Bubble.io
